

24th Annual Meeting of the European Society of Head and Neck Radiology

Arrangör: King Conventions

Kursort: Congress Center Oud-Sint Jan, Bruges Belgium

Tidpunkt: September 8- 10, 2011

Kontaktperson: sabrina.carron@kingconventions.be

Hemsida: www.eshnr2011.be

Deadline: 15-07-2011

Kursavgift meddelas senare

During this second ESHNR meeting held in Brugge, there will be general sessions covering imaging of most of the ENT-regions and the emphasis will be on new techniques and possibilities. Clinical correlation will be stressed during a special “temporal bone session” where surgeon-radiologist duos will discuss the most important and frequent problems. Another special session

“How does it work” will provide practical information about the new CT and MR techniques, practical information anyone of us can use to produce better images.

A special session on “Cone Beam CT” will be organized during a common session with the 4th International Congress on 3D diagnosis and virtual planning of craniomaxillo-facial deformity. Technique, indications and clinical use of CBCT will pass the revue.

For those participants who plan to buy a CBCT it will be a golden opportunity to see and compare the different systems, which will be on display.

Finally Prof. Anthony Mancuso, one of the founders of CT and MR based Head and Neck imaging, will be honored for the important influence he had on the training of Head and Neck radiologists in Western Europe (especially in Belgium and The Netherlands) during the session “The Mancuso generation”. Some of his students and himself will show how some of the early dreams in Head and Neck radiology over the years became or almost became reality-
